This information is intended for use by health professionals Metformin hydrochloride 850 mg film-coated tablets Each film-coated tablet contains 850 mg metformin hydrochloride corresponding to 663 mg metformin. For the full list of excipients, see section 6.1. Film-coated tablet. White, round [diameter 12.70 mm], biconvex, film-coated tablets with 'A' debossed on one side and '61' debossed on the other side. Treatment of type 2 diabetes mellitus, particularly in over weight patients, when dietary management and exercise alone does not result in adequate glycaemic control. • In adults, Metformin film-coated tablets may be used as monotherapy or in combination with other oral anti-diabetic agents or with insulin. • In children from 10 years of age and adolescents, Metformin hydrochloride film-coated tablets may be used as monotherapy or in combination with insulin. A reduction of diabetic complications has been shown in overweight type 2 diabetic adult patients treated with metformin hydrochloride as first-line therapy after diet failure (see section 5.1). Posology Adults with normal renal function (GFR≥ 90 mL/min) Monotherapy and combination with other oral antidiabetic agents: - The usual starting dose is 500 mg or 850 mg metformin hydrochloride 2 or 3 times daily given during or after meals. After 10 to 15 days the dose should be adjusted on the basis of blood glucose measurements. A slow increase of dose may improve gastrointestinal tolerability. The maximum recommended dose of metformin hydrochloride is 3 g daily, taken as 3 divided doses. If transfer from another oral antidiabetic agent is intended: discontinue the other agent and initiate metformin hydrochloride at the dose indicated above. Combination with insulin: Metformin hydrochloride and insulin may be used in combination therapy to achieve better blood glucose control. Metformin hydrochloride is given at the usual starting dose of 500mg or 850mg metformin hydrochloride 2or3 times daily, while insulin dosage is adjusted on the basis of blood glucose measurements. Elderly: Due to the potential for decreased renal function in elderly subjects, the metformin hydrochloride dosage should be adjusted based on renal function. Regular assessment of renal function is necessary (see section 4.4). Renal impairment A GFR should be assessed before initiation of treatment with metformin containing products and at least annually thereafter. In patients at an increased risk of further progression of renal impairment and in the elderly, renal function should be assessed more frequently, e.g. every 3-6 months. GFR mL/min Total maximum daily dose (to be divided into 2-3 daily doses) Additional considerations 60-89 3000 mg Dose reduction may be considered in relation to declining renal function. 45-59 2000 mg Factors that may increase the risk of lactic acidosis (see section 4.4) should be reviewed before considering initiation of metformin. The starting dose is at most half of the maximum dose. 30-44 1000 mg
